

# The Princeton Review Computer Diagnostic Exams

## SAT GRE LSAT GMAT

The Princeton Review, the nation's leader in test preparation, has produced a series of programs students can use to gauge their test-taking strengths and weaknesses, and to assess their performance for the Scholastic Assessment Test (SAT), Graduate Record Examination (GRE), Law School Admissions Test (LSAT), and Graduate Management Admissions Test (GMAT).

A major source of test anxiety lies in knowing that your score will be indelibly entered on your record. What if you could take the test, not have it count, and get your score back immediately? Computer Diagnostic Exams give you all of this and more.

Behind these programs lies almost \$1 million a year in research and development, and a company that works with over 60,000 students each year in its small classes, and over 500,000 students a year through its book series.

Computer Adaptive Tests (CATs) are the future of standardized testing. Eventually, every major standardized test will be administered in this format. The Princeton Review Computer Diagnostic Exams are the only programs available to familiarize students with the CAT and to stimulate the experience of taking a full-length test.

### How will you do on the new SAT?

Find out with The Princeton Review, the nation's leader in test preparation.

The Princeton Review has helped hundreds of thousands of students prepare for the SAT. Our new SAT Computer Diagnostic helps remove the fear and uncertainty from taking the new SAT (SAT-I).

Only our SAT Computer Diagnostic offers:

- **New SATs** - You'll take two full-length, brand SATs which include new "pilot" Math problems and current Critical Reading questions.
- **Quick feedback** - Cutting-edge computer adaptive technology pinpoints your SAT score in only an hour.
- **Questions by question review** - Review your performance one question at a time and print out full score reports that pinpoint your test-taking strengths and weaknesses.

**System requirements:**  
An IBM or compatible computer with at least 2 Megabytes of RAM. At least 2 Megabytes of free space on your hard drive.

**The Windows operating system, version 2.1 or later. A mouse. A VGA or better monitor.**

Learn the question types that you'll see on the SAT-I.

Easy-to-understand reports chart your progress.

### Product Facts:
